ABSTRACT:

PROBLEM TO BE SOLVED: To provide a method for sharing an object so that the

object can be shared between processes by generating the same object

another object by packet transmission or using a shared memory.

SOLUTION: A transmission process generates an object, and then transmits the

class name, instance name, and object main body of the object to a receiving

process as a packet P, and the receiving process generates an object having the

same class name, instance name, and object main body as the received packet,

and shares the object. The transmitting process arranges the generated object

on a shared memory, and the receiving process receives the class name, instance

name, and object address as the packet P, and shared the object on the share
